HansaWorld SmartApps

SmartApps is a solution for collecting data whenever and wherever it is created.

It runs on Nokia E-series mobile devices and data can easily be synchronized with the desktop version either on Windows, Mac or Linux. In addition to a variety of pre-designed applications, an online marketplace is available for sharing solutions. You can also build your own applications without needing programming
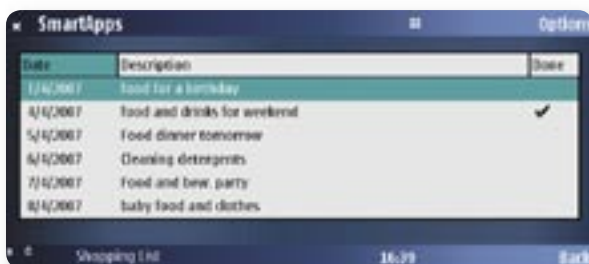

How can SmartApps make life easier?

• Imagine reviewing apartments and being able to save photos and add text comments, keeping all necessary information in one place.

• Imagine being able to do your expenses from your mobile phone, adding voice comments and photos of the expense documents.

• Imagine preparing for a large event and having to remember everything that has to be bought. With the Shopping List application you can easily enter the necessary goods and amounts, without having to fear losing the piece of paper shopping lists have traditionally been written on.

• Imagine working as a real estate agent and constantly having an up-to-date list of properties on the market, with the latest pricing details and photos for showing to potential buyers.

Why SmartApps?

• Make sure all relevant information is captured
• Make sure all the information is available online
• Save time by easy mobile reporting
• Cut costs and increase productivity

Making Use Of Being Connected

• Automatic product updates over the internet
• Remote backup on the internet on a server hosted by service provider, or on a server at customer premises
• Web based marketplace for sharing and selling 3rd party applications.

Availability and Pricing

Available in both single and multi user configurations, SmartApps can be used for both personal purposes as well as in all sizes of companies. The software will be available in 25 languages.

It will be free to try for 2 months, after that a payment with credit card or vouchers will be required. Pricing is EUR 10 per user/register per month.

Highly Secure

Transmissions used in SmartApps are encrypted and highly secured. All data stored on the phone is encrypted and password protected. The system is protected from possible attacks by user level authentication, proprietary database technology and encryption.
